

BIFROST

by Donna Whitlock

Embarking on your journey, you meet a storyteller who talks of Bifrost, the rainbow bridge of the gods that shimmered in colors of red, green and blue.

- Bridges may run horizontally or vertically and may not cross other bridges or islands.
- The number of bridges connected to an island matches the number on that island.
- At most two bridges connect any pair of islands.
- All islands must be connected into a single group.
